

CETA minimum requirements

For a strategic energy transition plan to be considered a Clean Energy Transition Agenda, the following content requirements need to be fulfilled:

1. It consists of at least two parts: one part that describes the current situation on the island and a second part that starts from an envisioned (decarbonised) future of the island.
2. Part I includes at least:
 - A general description of the island geography, economy and population,
 - A description of the current energy system, at least covering heating, cooling, electricity generation, transport on the island and transport to and from the island.
 - A stakeholder mapping that covers the actors from the local authorities, community organisations, local businesses, schools and academia that are relevant for the transition process,
 - An analysis of the policy and regulation that overarches the plan.
3. Part II includes at least:
 - A description of the governance of the transition process,
 - A vision statement that covers the entire island,
 - The identification and description of the main pillars of the transition process that cover at least heating, cooling, electricity generation, transport on the island and transport to and from the island.
 - A monitoring strategy

The following requirements in terms of lay-outing apply:

- There is no page limit or minimal word count. An ETA can be as short as 10 pages and as long as 100 pages.
- The name 'Energy Transition Agenda' is proposed as a title for the strategic plan, though this is not required.
- We encourage islands to develop a visual identity for the ETA that is independent of the Secretariat. We ask however that the ETA contains our logo and mentions the Clean Energy for EU Islands Initiative in the text.
